

NIST CSF TARGET PROFILE: VertexOne Digital Services

Function	Target State	Target Evidence / Measure	Target Objective	Priority	Timeframe	Status
GOVERN	Vendor security risk tiered by criticality; supply chain risk formally reported at every Management Review	Vendor risk tiers; supplier risk reports; Management Review minutes	Strengthen third-party and supply chain risk governance	High	12 Months	Target
IDENTIFY	Near-continuous asset discovery, including shadow cloud resources, supplementing the annual manual review	Automated asset discovery reports; cloud inventory; discovery logs	Improve visibility of organizational assets and unmanaged resources	High	12 Months	Target
PROTECT	95%+ sustained awareness completion; automated configuration drift scanning live across all cloud environments	Training completion reports; configuration drift reports; cloud security monitoring	Increase workforce security awareness and reduce cloud configuration risk	High	12 Months	Target
DETECT	Full monitoring coverage across all critical assets including legacy systems; mean-time-to-detect tracked and reported monthly	SIEM coverage reports; monitoring dashboards; monthly MTTD reports	Eliminate critical monitoring gaps and establish measurable detection performance	Critical	12 Months	Target
RESPOND	Annual incident response tabletop exercise completed; communication plan validated against a simulated scenario	Tabletop exercise report; lessons learned; communication validation records	Validate incident response and communication effectiveness	High	12 Months	Target
RECOVER	Recovery communication plan tested alongside each restoration test; lessons learned formally logged every cycle	Recovery test reports; communication test records; lessons-learned register	Improve recovery coordination and continuous improvement	Medium	12 Months	Target

Target Timeframe
12 months, reassessed quarterly against the Improvement Roadmap.
